DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 5 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 5 and 11, it is confusing and unclear how the first electrode (i.e. cathode) can be extended on the entire substrate. According to the based claims 1 and 8, the first electrode is not formed at the drive circuit region which formed on the substrate. In other words, the first electrode cannot be extended on the entire substrate. For the purpose of examination, it is assumed that the first electrode is extended on the substrate except for the drive circuit region.

e, is

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

5. Claims 1-5, 7-10 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Shibata et al., US Patent No. 6,147,451.

The above claims are anticipated by Shibata et al. figure 5 and accompanying text which disclose an organic electroluminescent (EL) display having:

a substrate (1);

an insulating layer (11);

a peripheral drive circuit region (30) having a CMOS thin film (col. 4, ln. 3);

a first electrode (24) and a second electrode (22), wherein the first electrode and the second electrode entirely overlap a display pixel region (22) and absent from the drive circuit region;

an electroluminescent layer (23).

Art Unit: 2871

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 6 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shibata et al., US Patent No. 6,147,451.

Regarding claims 6 and 11, Shibata et al. disclose the claimed invention as described above except for the arrangement of the cathode and anode in the EL display. It would have been obvious to one skilled in the art to form the Shibata et al. first electrode as a cathode and the discrete second electrode as an anode, since it has been held that rearranging parts of an invention involves only routine skill in the art. *In re Japikse*, 86 USPQ 70

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
